This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

We numerically compare four realizations of an Adaptive Isogeometric Method.

The methods are T-splines and THB-splines with two refinement strategies each.

We account for H1-errors, DOFs, sparsity patterns and condition numbers.
