This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Demonstration that the cumulant lattice Boltzmann model with optimized parameters captures the drag crisis for flows over a sphere.
- It is observed that, in the transition regime between the high and the low drag configuration, the flow switches from one state to the other state.
