This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A numerical method for elasticity in axisymmetric semi-infinite domains is proposed
- The method couples finite elements with Dirichlet-to-Neumann boundary conditions
- The lack of an explicit closed-form expression for the DtN map needs to be overcome
- This is done by using a procedure that combines analytical and numerical techniques
- The numerical experiments confirm the effectiveness and accuracy of the method
