This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- On-the-fly generation of visual summaries from geo-data coming from the sensors.
- New approach about the use of chorems for automated data processing applications.
- We define chorem as a semantic and a geometric generalization of a territory.
- Our interest was not to represent the entire information, but the most relevant aspects.
- We address cartographic generalization and spatial conflict resolution problems.
