Improving performance of sparse matrix dense matrix multiplication
on large-scale parallel systems

Seher Acer, Oguz Selvitopi, Cevdet Aykanat

PII: S0167-8191(16)30104-1
DOI: [10.1016/j.parco.2016.10.001](https://doi.org/10.1016/j.parco.2016.10.001)
Reference: PARCO 2351

To appear in: *Parallel Computing*

Received date: 30 March 2015
Revised date: 25 August 2016
Accepted date: 5 October 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A generic model to scale sparse matrix dense matrix multiplication (SpMM).
- SpMM suffers from high communication volume overhead.
- Different volume-based metrics such as maximum volume besides total volume.
- Simultaneous minimization of volume-based communication cost metrics.
- Portable models based on graph and hypergraph partitioning.
