Cluster-based Adaptive SVM: A Latent Subdomains Discovery
Method for Domain Adaptation Problems

Azadeh Sadat Mozafari , Mansour Jamzad

PII: S1077-3142(17)30114-5
DOI: [10.1016/j.cviu.2017.06.002](https://doi.org/10.1016/j.cviu.2017.06.002)
Reference: YCVIU 2586

To appear in: *Computer Vision and Image Understanding*

Received date: 13 August 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We propose a new latent subdomains discovery method for domain adaptation approach.
- We call this new method CA-SVM and it is designed based on a new simultaneously clustering and adaptation method.
- CA-SVM uses linear SVM model for classification in the source and target domains.
- CA-SVM does not need source samples for applying division.
