This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Automatic kinship verification capability of periocular images is evaluated.
- A block-based NRML (BNRML) method is proposed to learn patch-wise distance metric.
- Information from left and right periocular regions is fused for performance gain.
- Extensive experiments demonstrated encouraging performance of periocular features.
