This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- A simultaneous restoration and segmentation variational method is proposed for PET.
- Multiple regularizations are employed to fit multiple image components in PET.
- Metabolic uptake values on tumor edges in PET are regularized.
- The blur kernel is modeled as an anisotropic Gaussian.
- The proposed method can handle PVE and is independent to imaging systems.
