This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We propose a label-tree based method for efficient large-scale multi-class image classification.
- The proposed method learns effective and balanced trees by jointly optimizing balance and confusion constraints.
- We carried out extensive experiments to compare our method to other state-of-the-art methods on four large-scale datasets.
