Novel Efficient Deployment Schemes for Sensor Coverage in Mobile Wireless Sensor Networks

Wei Fang, Xinhong Song, Xiaojun Wu, Jun Sun, Mengqi Hu

PII: S1566-2535(16)30254-8
DOI: [10.1016/j.inffus.2017.08.001](https://doi.org/10.1016/j.inffus.2017.08.001)
Reference: INFFUS 888

To appear in: *Information Fusion*

Received date: 27 December 2016
Revised date: 12 May 2017
Accepted date: 3 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The Voronoi blindzone polygon is studied for finding coverage holes efficiently.
- Two schemes are proposed based on Voronoi blindzone polygon and local operators.
- Latest metrics are used to evaluate the performance of proposed deployment schemes.
- The proposed two deployment schemes show effectiveness by the simulation results.
