Learning Features for Offline Handwritten Signature Verification using Deep Convolutional Neural Networks

Luiz G. Hafemann, Robert Sabourin, Luiz S. Oliveira

PII: S0031-3203(17)30201-7
DOI: [10.1016/j.patcog.2017.05.012](https://doi.org/10.1016/j.patcog.2017.05.012)
Reference: PR 6151

To appear in: *Pattern Recognition*

Received date: 6 December 2016
Revised date: 6 April 2017
Accepted date: 13 May 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We propose formulations for learning features for Offline Signature Verification
- A novel method that uses knowledge of forgeries from a subset of users is proposed
- Learned features are used to train classifiers for other users (without forgeries)
- Experiments on GPDS-960 show a large improvement in state-of-the-art
- Results in other 3 datasets show that the features generalize without fine-tuning
