A Survey of Local Feature Methods for 3D Face Recognition

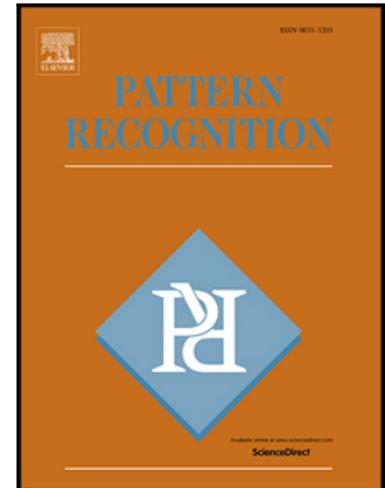

Sima Soltanpour, Boubakeur Boufama, Q.M. Jonathan Wu

PII: S0031-3203(17)30307-2
DOI: [10.1016/j.patcog.2017.08.003](https://doi.org/10.1016/j.patcog.2017.08.003)
Reference: PR 6239

To appear in: *Pattern Recognition*

Received date: 8 January 2017
Revised date: 20 July 2017
Accepted date: 3 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A survey of 3D face methods with the main focus on local features is conducted.
- The popular 3D face databases are described along with their acquisition technology.
- 3D local descriptors are divided into key-points, curves, and surface-based methods.
- The surveyed approaches are summarized and compared under different conditions.
