This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A method for automatic organization of egocentric videos
- An effective and fast content-based video segmentation
- A framework for clustering of video clips
- The method overcomes other state of the art in terms of both accuracy and computational time
- The overall system is robust both on wearable and mobile domains
