Dynamic Ensembles of Exemplar-SVMs for Still-to-Video Face Recognition

Saman Bashbaghi, Eric Granger, Robert Sabourin,
Guillaume-Alexandre Bilodeau

PII: S0031-3203(17)30165-6
DOI: [10.1016/j.patcog.2017.04.014](https://doi.org/10.1016/j.patcog.2017.04.014)
Reference: PR 6122

To appear in: *Pattern Recognition*

Received date: 28 September 2016
Revised date: 12 February 2017
Accepted date: 12 April 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An efficient multi-classifier system is proposed for robust still-to-video FR
- Multiple diverse representations are generated from the single target still face
- Individual-specific ensembles of exemplar-SVM are designed based on domain adaptation
- Different domain adaptation training schemes are proposed to generate the classifiers
- Dynamic classifier selection and weighting are applied to perform spatio-temporal FR
