Deep, Dense and Accurate 3D Face Correspondence for Generating Population Specific Deformable Models

Syed Zulqarnain Gilani, Ajmal Mian, Peter Eastwood

PII: S0031-3203(17)30164-4
DOI: [10.1016/j.patcog.2017.04.013](https://doi.org/10.1016/j.patcog.2017.04.013)
Reference: PR 6121

To appear in: *Pattern Recognition*

Received date: 20 October 2016
Revised date: 13 March 2017
Accepted date: 12 April 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A Deep Network trained on synthetic 3D data to detect facial landmarks is proposed.
- The landmarks are used to establish region based 3D face dense correspondence.
- Correspondence is established across identities and facial expressions.
- A Region based 3D Face deformable model is proposed.
- The model outperforms others in landmarking and face recognition experiments.
