Feature Learning via Partial Differential Equation with Applications to Face Recognition

Cong Fang, Zhenyu Zhao, Pan Zhou, Zhouchen Lin

PII: S0031-3203(17)30144-9
DOI: [10.1016/j.patcog.2017.03.034](https://doi.org/10.1016/j.patcog.2017.03.034)
Reference: PR 6107

To appear in: *Pattern Recognition*

Received date: 19 January 2016
Revised date: 27 March 2017
Accepted date: 28 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A novel Partial Differential Equation method is proposed for feature learning.
- The feature is discriminative and invariant under rotation, translation and illumination.
- The method is efficient in low-resolution images and when the samples are few.
- To our best knowledge, this is the first work that applies PDE to feature learning.
