Robust Visual Tracking via Co-trained Kernelized Correlation Filters

Le Zhang, P.N. Suganthan

PII: S0031-3203(17)30152-8
DOI: [10.1016/j.patcog.2017.04.004](https://doi.org/10.1016/j.patcog.2017.04.004)
Reference: PR 6112

To appear in: *Pattern Recognition*

Received date: 12 October 2016
Revised date: 14 March 2017
Accepted date: 4 April 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We train a pool of discriminative classifiers jointly in a closed-form fashion for visual tracking.
- We propose analytic model for datasets of thousands of translated patches.
- It is able to outperform the baseline by a larger margin.
