Granular multi-label feature selection based on mutual information

Feng Li, Duoqian Miao, Witold Pedrycz

PII: S0031-3203(17)30085-7
DOI: [10.1016/j.patcog.2017.02.025](https://doi.org/10.1016/j.patcog.2017.02.025)
Reference: PR 6062

To appear in: *Pattern Recognition*

Received date: 31 May 2016
Revised date: 17 February 2017
Accepted date: 18 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We granulate the label space into information granules to exploit label dependency.
- We present a multi-label maximal correlation minimal redundancy criterion.
- The proposed method can select compact and specific feature subsets.
- The proposed method can significantly improve the algorithm performance.
