This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We propose a semi-supervised hashing method which uses very limited labeled data.
- We integrate manifold embedding, feature representation and classifier learning into a joint optimization framework.
- We adopt the $l_{2,1}$ -norm in our formulation to obtain a robust model.
- We develop a two-stage hashing strategy to address the optimization problem.
