Combining feature extraction and expansion to improve classification based similarity learning

Emilia López-Iñesta, Francisco Grimaldo, Miguel Arevalillo-Herráez

PII: S0167-8655(16)30316-6
DOI: [10.1016/j.patrec.2016.11.005](https://doi.org/10.1016/j.patrec.2016.11.005)
Reference: PATREC 6671

To appear in: *Pattern Recognition Letters*

Received date: 8 May 2016
Revised date: 28 September 2016
Accepted date: 8 November 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A competitive similarity learning method using a classification setting is proposed
- The format of the data input has a major influence in classification performance
- Best results are obtained by combining feature extraction and expansion
- Adding a set of convenient standard distances help learning of the similarity score
- Results are above state-of-the-art metric learning methods in a variety of contexts
