Combining image and global pixel distribution model for skin colour segmentation

Biplab Ketan Chakraborty, M.K. Bhuyan, Sunil Kumar

PII: S0167-8655(17)30005-3
DOI: [10.1016/j.patrec.2017.01.005](https://doi.org/10.1016/j.patrec.2017.01.005)
Reference: PATREC 6720

To appear in: *Pattern Recognition Letters*

Received date: 10 August 2016
Revised date: 1 December 2016
Accepted date: 11 January 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research Highlights (Required)

Proposed:

- A local skin distribution model utilizing image pixel distribution.
- A fusion rule for combining local and the global skin pixel distribution model.
- Dynamic region growing to grow skin regions dynamically to minimize false detection error.
