This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

The main contributions of this paper are:

- A new method for recognition of non-deformable severe occluded objects.
- Local shape descriptor from the wavelet coefficients of the tangent angle signature.
- Most likely object retrieval based on an ensemble of Hidden Markov Models.
- Two new area restrictions for consistency checking between hypotheses and occlusion.
