This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This paper reviews the current representation-based classifiers and detectors.
- Five categories of representation-based classification are summarized.
- Survey on detectors with sparse and collaborative representations.
- Possible direction of future research is indicated.
