

Accepted Manuscript

A new multi-level approach to EEG based human authentication using eye blinking

M. Abo-Zahhad, Sabah M. Ahmed, Sherif N. Abbas

PII: S0167-8655(15)00243-3
DOI: [10.1016/j.patrec.2015.07.034](https://doi.org/10.1016/j.patrec.2015.07.034)
Reference: PATREC 6303

To appear in: *Pattern Recognition Letters*

Received date: 3 March 2015
Accepted date: 23 July 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research Highlights

To create your highlights, please type the highlights against each `\item` command.

It should be short collection of bullet points that convey the core findings of the article. It should include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point.)

- A new multi-level EEG biometric authentication system based on eye blinking EOG signals is proposed
- Eye blinking features based on time delineation
- Two approaches for the proposed multi-level system based on feature and score level fusion
- Multi-level system achieved higher recognition rates than single level one using EEG only
