Biographical notes: Josip Stjepandić is the head of business unit 3D Product Creation at PROSTEP AG, the leading product data integration company worldwide. He is in charge for consultancy and solution development in the areas design methodology, supplier integration, systems engineering, knowledge-based engineering, product data validation and visualization, configuration management and CAD data exchange for many industries (automotive, aerospace, shipbuilding, machinery). In the past, he gathered strong research experience in these areas including his current research on systems engineering, modular design, and digital factory. He is the author of various scientific articles and publications in the field of virtual product creation and a board member of the International Society for Productivity Enhancement Inc. (ISPE).

Margherita Peruzzini is Assistant Professor at the Department of Engineering “Enzo Ferrari” of the Università degli Studi di Modena e Reggio Emilia. She works in the research groups of Methods and Tools for Industrial Engineering and is lecturing in Machine Design and Innovation Design. She graduated in Mechanical Engineering in 2007 and she received her Ph.D. in Mechanical Engineering and Engineering Management in 2010. She actually coordinates the Virtual Prototyping Lab (VipLAB) of the Modena Technopole and carries out her research within the Laboratory of Integrated Design and Simulation (LAPIS) at the Università degli Studi di Modena e Reggio Emilia. Her topics of research are: virtual prototyping, digital manufacturing, human-centred design, human-computer interaction, collaborative virtual environments and co-design. She actually participates in some industrial research projects, at national and European level, about Human-Centred Design, Sustainable Manufacturing and Industry 4.0. She is author of more than 80 international publications on journals and conference proceedings, and she is a board member of the International Society for Productivity Enhancement Inc. (ISPE).

Smart Manufacturing is made of “fully-integrated, collaborative manufacturing systems that respond in real time to meet changing demands and conditions in the factory, in the supply network, and in customer needs” (NIST, National Institute of Standards and Technology, 2014). However, Smart Manufacturing has been also defined as “the ability to solve existing and future problems via an open infrastructure that allows solutions to be implemented at the speed of business while creating advantaged value” (SMLC, Smart Manufacturing Leadership Coalition, 2015). By the way, Smart Manufacturing is being predicted as the next Industrial Revolution, enabled by the recent technology connectivity and the unprecedented access to and sharing of data (Lu, 2017). However, Smart
