This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new event-triggered sampling scheme for filtering of switched systems is proposed.
- A filtering model based on event-triggered sampled data of both the system output and the system mode is developed.
- The weighted H_∞ performance analysis result for the filtering error systems is obtained.
