This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- We formulate optimization problems for sensor, link, and relay selection.
- The formulations guarantee connectivity of the resulting selected subset.
- To solve the problems, we propose two sparsity-aware algorithms based on a convex relaxation.
- We also extend the work to a special case where only link selection is considered.
