This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A nonconvex and non-continuous regularized variational model is proposed to recover the Poisson noisy and blurred image.
- The proposed nonconvex model improves the quality of restored Poisson noisy and blurred image compared with the convex models such as total variation based model and L-1 tight wavelet frame based model.
- The proposed algorithm is efficient to implement and produces more accurate solution.
- Convergence and stability of the proposed algorithms are verified from the numerical perspective.
