Title: Conception of a novel spray tower plasma-reactor in a spatial post-discharge configuration: pollutants remote treatment

Author: Mohamed Fouad Ferhat Ghezzar Mouffok Redouane
Bentaïba Smaïl Cedric Guyon Stéphanie Ognier Ahmed Addou

PII: S0304-3894(16)30874-3
DOI: <http://dx.doi.org/doi:10.1016/j.jhazmat.2016.09.052>
Reference: HAZMAT 18058

To appear in: *Journal of Hazardous Materials*

Received date: 30-7-2016
Revised date: 4-9-2016
Accepted date: 22-9-2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A novel plasma GAD reactor was developed to treat polluted liquids in a spray tower
- Hydrodynamics and mass transfer characteristics were studied in the reactor
- Phenol, 4-Nitrophenol and catechol were successfully degraded
- The spatial-temporal post discharge is a novel concept used to degrade pollutants
