Graphical Abstract

**Fig. 1.** (a) Schematic of the rotating EMHD flow through a microchannel; (b) Cross section of the microchannel.

## Research Highlights:

- Numerical solution of rotating EMHD flow of power-law fluids is presented.
- The velocity of rotating EMHD flow is obtained by the finite difference method.
- Results are compared with existing works, and very well agreements are obtained.
- The effects of the related parameters on rotating EMHD velocity are studied.

## ABSTRACT

In this study, rotating electromagnetohydrodynamic (EMHD) flow of power-law fluid through a narrow microchannel is investigated. The flow is actuated by the Coriolis force raised from the rotation of the microchannel and the Lorentz force induced by the interaction between
