Azide-assisted crosslinked quaternized polysulfone with reduced graphene oxide for highly stable anion exchange membranes

Bo Hu, Luyang Miao, Yanxu Zhao, Changli Lü

PII: S0376-7388(16)31423-5  
DOI: <http://dx.doi.org/10.1016/j.memsci.2017.02.023>  
Reference: MEMSCI15082

To appear in: *Journal of Membrane Science*

Received date: 25 August 2016  
Revised date: 16 November 2016  
Accepted date: 17 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
