Gas-liquid two phase flow with high GVF through a horizontal V-Cone throttle device

Denghui He , Bofeng Bai

PII: S0301-9322(16)30452-9
DOI: [10.1016/j.ijmultiphaseflow.2017.01.001](https://doi.org/10.1016/j.ijmultiphaseflow.2017.01.001)
Reference: IJMF 2521

To appear in: *International Journal of Multiphase Flow*

Received date: 4 August 2016
Revised date: 30 November 2016
Accepted date: 13 January 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Effects of V-Cone body on flow pattern were investigated.
- Pressure recovery length of V-Cone throttle device was determined.
- Differential pressure fluctuation and Frictional resistance upstream and downstream V-Cone were discussed.
- Pressure loss of V-Cone throttle device was analyzed and a correlation for predicting the pressure loss was developed.
