This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- The superimposing relative velocity field in bubble columns is presented.
- The slip velocity of the mean bubbles is constant for a particular liquid.
- Large bubbles blowing up the cross-sectional velocity field induce liquid dispersion.
