Events and conditions in droplet impact: a phase field prediction

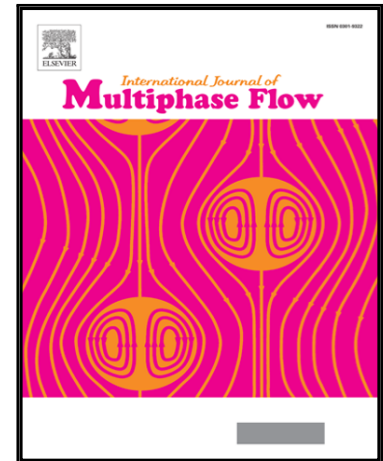

Yuli Wang, Anthony Gratadeix, Minh Do-Quang, Gustav Amberg

PII: S0301-9322(16)30061-1
DOI: [10.1016/j.ijmultiphaseflow.2016.08.009](https://doi.org/10.1016/j.ijmultiphaseflow.2016.08.009)
Reference: IJMF 2463

To appear in: *International Journal of Multiphase Flow*

Received date: 17 February 2016
Revised date: 30 August 2016
Accepted date: 30 August 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Diffusive interface modeling can capture detailed outcomes of droplet impact
- The liquid properties are important in early spreading for impacts of low speed
- The Reynolds number and Ohnesorge number confine a region for a central bubble to be observed
