POLYMER ORIENTATION CONTRIBUTIONS IN  
LARGE-AMPLITUDE OSCILLATORY SHEAR FLOW

P.H. Gilbert , A.J. Giacomin

PII: S0377-0257(17)30048-4  
DOI: [10.1016/j.jnnfm.2017.04.004](https://doi.org/10.1016/j.jnnfm.2017.04.004)  
Reference: JNNFM 3886

To appear in: *Journal of Non-Newtonian Fluid Mechanics*

Received date: 2 February 2017  
Accepted date: 12 April 2017

Please cite this article as: P.H. Gilbert , A.J. Giacomin , POLYMER ORIENTATION CONTRIBUTIONS IN LARGE-AMPLITUDE OSCILLATORY SHEAR FLOW, *Journal of Non-Newtonian Fluid Mechanics* (2017), doi: [10.1016/j.jnnfm.2017.04.004](https://doi.org/10.1016/j.jnnfm.2017.04.004)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Polymer molecular orientation can explain all polymer rheological responses
- We use rigid dumbbell theory to create relations between orientation and rheology
- All orientations contributing to the normal stresses contribute to the shear stress
- Some parts of orientation do not contribute to any rheological response
