Title: Key process parameters affecting performance of electro-coagulation

Authors: Pavel Krystynik, Duarte Novaes Tito

PII: S0255-2701(16)30598-0
DOI: <http://dx.doi.org/doi:10.1016/j.cep.2017.03.022>
Reference: CEP 6958

To appear in: *Chemical Engineering and Processing*

Received date: 10-11-2016
Accepted date: 29-3-2017

Please cite this article as: <http://dx.doi.org/>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlists

- Mechanistic approach to electrocoagulation
- Arsenic removal in continuous electro-coagulation
- Dosing concentration is the dominant process parameter
- Demonstration of EC performance evaluation
