Green chemistry for the optimum technology of biological conversion of vegetable waste

Anna S. Makarova, Dmitry V. Baurin, Mariia G. Gordienko, Evgenia I. Kudryavtseva

PII: S2352-5509(16)30033-1

DOI: <http://dx.doi.org/10.1016/j.spc.2016.12.003>

Reference: SPC 79

To appear in: *Sustainable Production and Consumption*

Received date: 2 September 2016

Revised date: 5 December 2016

Accepted date: 13 December 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research Highlights

Two-stage pretreatment provides higher efficiency of DSFM processing.

Assessing of waste treatment efficiency according to green chemistry principles is proposed.

Low-waste and resource-saving technology of feed production is considered.

The use of biotechnology seems to be a key element of bioeconomy.
