This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Catechol-Modified Green Fluorescent Protein as a Specific Biosensor for Al ions

### Graphical Abstract

### Highlights

- A fluorescent protein-based biosensor that genetically incorporates a metal ion binding site was produced.
- The protein biosensor showed a selective fluorescence enhancement in the presence of Al<sup>3+</sup> at the  $\mu$ M level.
- *In vivo* tests were carried out to demonstrate the detection performance in practical situations.
