This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

M. J. MA, S. Y. LIU AND J. LI

Highlights

- A drug model including the impact of media coverage is proposed.
- We obtain the global dynamical behaviors of the model, and numerical simulations are given to support the theoretical results.
- Our results demonstrate that the media effect in human population cannot change the drug infectivity but can affect the final number of drug addicts.
