This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- This paper addresses a hydro-turbine governing system with fractional item and time-lag.
- We put the system to the framework of the generalized Hamiltonian system.
- A novel Hamiltonian function to describe detailed energy information is proposed.
- The laws of the system parameters varying with fractional order is studied.
- The laws of the system parameters varying with time lag is studied.
- The difference between fractional calculus and time-lag are discussed in nature.
