Formation and coarsening of roll-waves in shear shallow water flows down an inclined rectangular channel

K.A. Ivanova, S.L. Gavriluk, B. Nkonga, G.L. Richard

PII: S0045-7930(17)30362-6
DOI: [10.1016/j.compfluid.2017.10.004](https://doi.org/10.1016/j.compfluid.2017.10.004)
Reference: CAF 3620

To appear in: *Computers and Fluids*

Received date: 30 November 2016
Revised date: 27 September 2017
Accepted date: 3 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Wave coarsening for roll waves down an inclined plane is demonstrated.
- Morphological instability of long wave trains on shear flows is observed.
- Stability of a single 1-D wave under multi-D perturbations is established.
