This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Here compact scheme on non-uniform grids is presented, applicable on physical plane.
- Method has been analysed by global spectral analysis.
- Unstructured grid numerical properties identified for the first time.
- Method is calibrated for 1D/2D convection problem.
- It is also used for Navier-Stokes equation for 2D problems.
