Comparative Study of Turbulence Models for Scale-Resolving Simulations of Internal Combustion Engine Flows

S. Buhl, F. Dietzsch, C. Buhl, C. Hasse

PII: S0045-7930(17)30235-9
DOI: [10.1016/j.compfluid.2017.06.023](https://doi.org/10.1016/j.compfluid.2017.06.023)
Reference: CAF 3528

To appear in: *Computers and Fluids*

Received date: 6 September 2016
Revised date: 4 May 2017
Accepted date: 27 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Comparative study of selected scale-resolving turbulence models in IC engine flows
- Similar qualitative and quantitative results in terms of the phase-averaged velocities
- Similar results in terms of resolved fluctuations
- All models have the capability to resolve cyclic-to-cycle variations
