Anisotropic triadic closures for shear-driven and buoyancy-driven turbulent flows

Claude Cambon, Vincent Mons, Benoît-Joseph Gréa, Robert Rubinstein

PII: S0045-7930(16)30389-9
DOI: [10.1016/j.compfluid.2016.12.006](https://doi.org/10.1016/j.compfluid.2016.12.006)
Reference: CAF 3346

To appear in: *Computers and Fluids*

Received date: 4 March 2016
Revised date: 10 November 2016
Accepted date: 8 December 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Implementation strategies of triadic closures are reviewed and compared
- A general formalism to analyze anisotropic turbulence is proposed
- New results concerning scaling laws of anisotropic spectra are shown
