Numerical and experimental investigation of the shock and steady state pressures in the bird material during bird strike

Frederik Allaeys, Geert Luyckx, Wim Van Paepegem, Joris Degrieck

PII: S0734-743X(16)30884-3  
DOI: [10.1016/j.ijimpeng.2017.05.006](https://doi.org/10.1016/j.ijimpeng.2017.05.006)  
Reference: IE 2922

To appear in: *International Journal of Impact Engineering*

Received date: 3 November 2016  
Revised date: 20 March 2017  
Accepted date: 4 May 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Numerical shock and steady state pressures during bird strike
- Increased shock pressures for slightly tilted projectiles
- The elastic energy as a measure for the shock regime
- Experimental pressure measurements with non-porous and porous gelatine and doves
