This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We designed three sets of steel box structures using “Replica” scaling law.
- We investigated steel box structures under internal blast through experiments.
- Scaling dynamic deformation was obtained.
- The reasons for imperfect similarity were discussed.
- Correction of the traditional scaling law for steel box structure was conducted.
