Effect of the Plastic Hinge and Boundary Conditions on the Impact Behavior of Reinforced Concrete Beams

Thong M. Pham , Hong Hao

PII: S0734-743X(16)30585-1
DOI: [10.1016/j.ijimpeng.2016.12.005](https://doi.org/10.1016/j.ijimpeng.2016.12.005)
Reference: IE 2789

To appear in: *International Journal of Impact Engineering*

Received date: 30 August 2016
Revised date: 5 December 2016
Accepted date: 9 December 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Definition of a relatively long beam in impact behavior.
- Effect of plastic hinge on the impact behavior.
- Effect of boundary condition on the impact behavior.
