This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- The ballistic resistance is modeled using the stochastic Brownian motion approach.
- The computed ballistic limit is comparable to the estimations using existing methods.
- The perforation probability varies from 0 to 1 in a bounded impact velocity interval.
- The perforation probability can be computed for each impact velocity.
