Accepted Manuscript

Boundary layer flow of nanofluid over a moving surface in a flowing fluid using revised model with stability analysis

Shah Jahan, Hamzah Sakidin, Roslinda Nazar, Ioan Pop

PII: S0020-7403(17)31186-4

DOI: 10.1016/j.ijmecsci.2017.07.064

Reference: MS 3872

To appear in: International Journal of Mechanical Sciences

Received date: 3 May 2017 Revised date: 14 July 2017 Accepted date: 30 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A numerical study is performed to investigate the problem of stagnation-point flow
- Exponentially permeable shrinking sheet with heat generation and suction is considered
- The governing partial differential equations are transformed into ordinary differential equations
- Dual solutions are found for a certain range of the shrinking and suction parameters
- A stability analysis has been performed to determine which solution is stable and physically realizable
