This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- Equivalent stress-strain data from Yld2000-2d-Var represent the hardening behavior.
- FLCs are accurately predicted by M-K model with Yld2000-2d-Var and Swift law.
- The stretch formability depends on the suitable material model and FLCs.
- The precise yield criterion is of great significance to the formability prediction.
